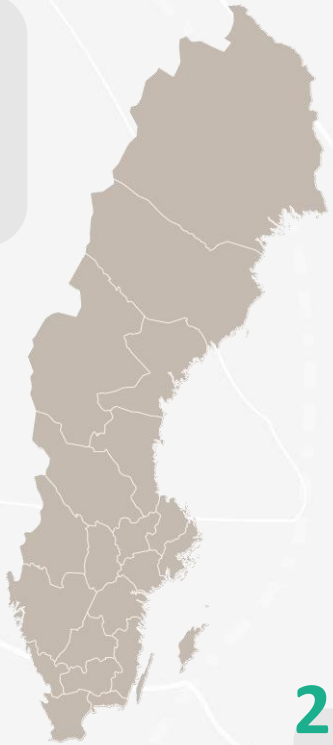
GLASS PACKAGING

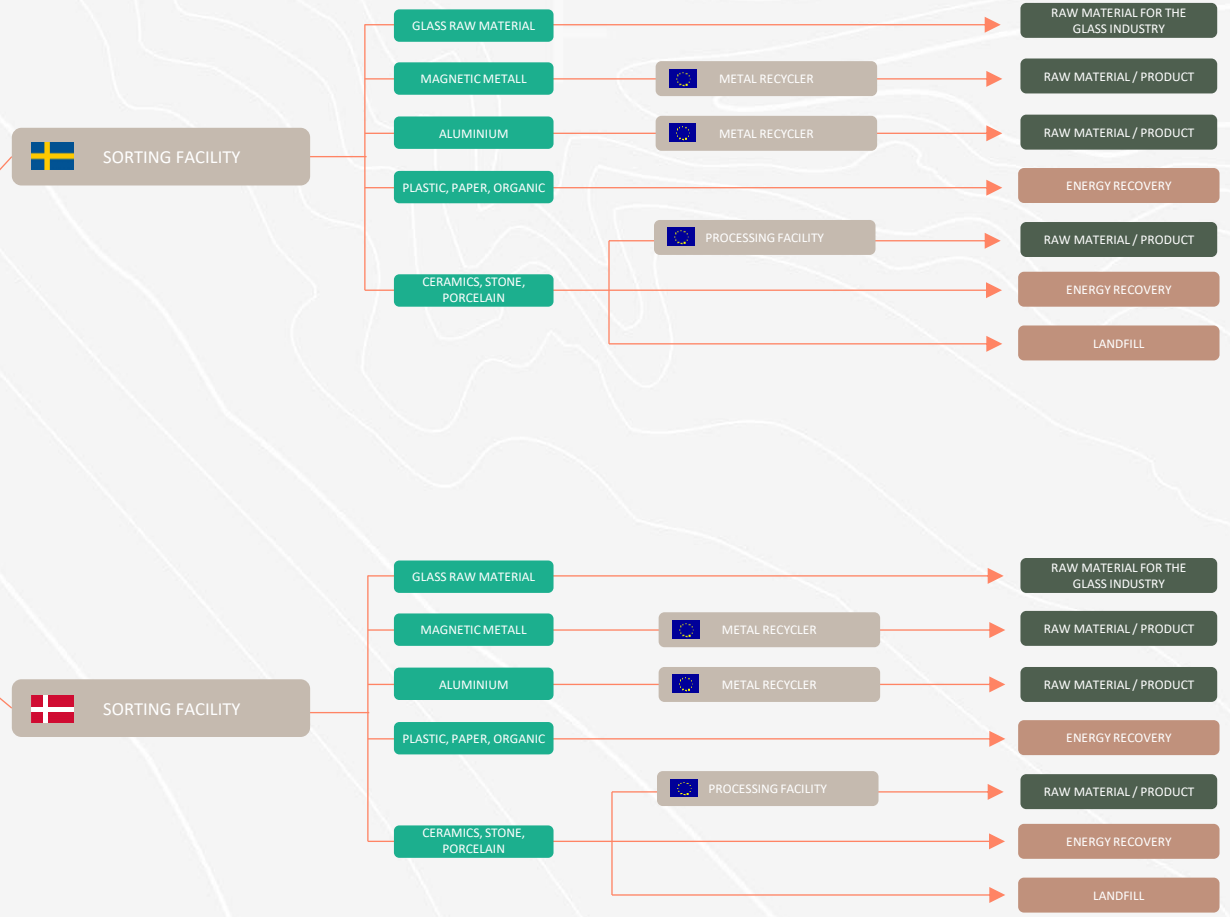
1

TMR retrieves glass packaging from Sweden's 290 municipalities via 270 collection points, 35 of them are baling facilities. Municipalities without their own collection point collaborate with other municipalities



2

Colored glass and clear glass are always collected separately and are never mixed during transport.



3

The glass raw material is delivered to the glass industry, where it is melted down and used to manufacture new glass bottles and jars.

The illustration is simplified and does not show all process steps. For more details about the flows, please contact us
